# Running Live Website Tests on Desktop Browsers

You can run live tests of your websites on a wide variety of operating system, browser, version, and screen resolution configurations.

---

**Using the Live Testing Cheat Sheet**
The Live Testing Cheat Sheet provides a handy way for you to track use cases and actions for your live tests, as well as analyze your test coverage. For more information, read the **Instructions** tab. The analysis examples are based on mobile devices and operating systems, but charts and statistics can be updated for any platform/browser/operating system that you test against.

---

1. Log in to Sauce Labs and select **Live Testing**.
2. Click **Web Browser**.
3. Click **Desktop**.
4. For **Test URL**, enter the URL of the website you want to test in the browser.
5. Select the **Browser Version** and **Screen Resolution** you want to use in your test.
6. Select the **OS Version** you want to use.
   You can find previous configurations you've used in your tests under **Recent**. You can also save configurations for later use by selecting **Save this Configuration**.
7. If you use Sauce Connect Proxy to test application on local host or behind a firewall, select the tunnel to use for your tests.
8. Test assets such as screenshots are automatically saved. If you don't want to save them, clear the **Save Screenshots, Logs, & Video** option.
9. Click **Start Session**.
   You'll see a loading screen, and then the application will launch in a live test window using the configuration you selected.

Once your session launches, you can use your mouse cursor and keyboard to interact with the website under test.

---

**Running Tests in Parallel**
You can run multiple live test sessions at the same time, with the number of tests limited by the concurrency allowance associated with your account. If you want to start additional sessions, click the **+** icon next to the tab containing the URL of your current test session. Follow the steps to set up the session, and then you can switch back and forth between the sessions by clicking on the URL tabs.
