

Support for iOS 11.2 on Simulators

Return to the [Product Announcements and Release Notes Blog](#)

Dear Sauce user,

We added support for iOS 11.2 on Simulators on January 23rd, 2018.

Please set *platformVersion* Desired Capability to "11.2" or "latest" to test on iOS 11.2. "latest" value always defaults to the latest version of iOS available on Sauce Simulators.

Please note that iOS 11.2 has been available on Sauce real devices from the day it was released. The latest update means that Sauce now offers iOS 11.2 on both Simulators and real devices.

Sauce [Platform Configurator](#) has been updated with an option for iOS 11.2.

Best regards and happy testing,

The Sauce Labs Team
