

RDC Support for Espresso TestOrchestrator

Sauce Labs is happy to announce Real Device Cloud support for [Android Espresso TestOrchestrator](#). Android Test Orchestrator allows you to run each of your app's tests within its own invocation of Instrumentation.

Users can set the `--useTestOrchestrator` parameter when using the Sauce Runner for Real Devices. Further details in the [Command Reference for Sauce Runner for Real Devices](#) documentation.

Happy Testing,

Asaf Saar
Sr. Director of Product Management
