

Sharing Test Results in HipChat

The Sauce Labs add-on for HipChat lets you enter the URL of any Sauce Labs test details page in a HipChat conversation to share those test results, videos, and screenshots via HipChat.

HipChat Changelog

You can find the changelogs for all Sauce Labs for HipChat plugin versions in [our Atlassian Marketplace listing](#).

Installing the Add-On

The Sauce Labs add-on for HipChat is available from the Atlassian Marketplace:

<https://marketplace.atlassian.com/plugins/sauce-hipchat-service/cloud/overview>

Follow the instructions in the Marketplace to download and install the add-on.

Sharing Test Results

1. Copy the URL of the test details page you want to share.
2. Paste the URL into the text window of the conversation where you want to share the results, and press **Return**. You'll see a Sauce Labs window open in your HipChat conversation, showing some basic details about the test, as well the first screenshot of the test.

Credentials Must Match Test Owner

For security reasons, you must be logged into HipChat with the same credentials as the owner of the test to see the first screen shot in HipChat. If you select **Show Screenshots** in the options menu, you will be able to view the screenshots that have been shared.

3. Click to the right of the Sauce Labs window to select additional options:

Option	Description
Show Job Details	Opens the Test Details page for the test in HipChat
Show Video	Runs the video of the test in HipChat <div data-bbox="852 1474 1458 1640"><h4>Viewing Video in the HipChat Client</h4><p>Because the HipChat client doesn't support Flash, viewing video of the test is available only for the browser-based version of HipChat.</p></div>
Show Screenshots	Shows screenshots of the test in HipChat

Screenshot of the Sauce Labs Add-On for HipChat

This screenshot shows the test information as it appears in the Sauce Labs window in HipChat, with the option menu open for sharing the Test Details page, the video, and screenshots.

The screenshot shows a HipChat message from Gavin Mogan at 8:35 PM on Sep-14. The message content includes a Selenium test job summary for 'verifyCheckedOut' on saucelabs.com. The job details are: Owner: halkeye, Platform: Mac 10, Start: Sep 7, 2016, End: Sep 7, 2016, Duration: a few s, and Build: JJS-BUIL-. A context menu is open over the message, listing sharing options: 'Send this message to addon', 'Open Dialog (Simple)', 'Open External Page (Message)', 'Open External Page (Card)', 'Show job details', 'Show video', and 'Show screenshots'. A red box highlights the last three options, and an arrow points from a text box above to the 'Show screenshots' option.

Sharing options for test details, video, and screenshots in HipChat

- Send this message to addon
- Open Dialog (Simple)
- Open External Page (Message)
- Open External Page (Card)
- Show job details
- Show video
- Show screenshots
