

Android 8.0: Now available on Sauce Emulators!

As we continue our mission to provide our users with the best coverage for testing applications, we are happy to announce that Sauce Labs now supports Android 8.0 emulators. The new emulators support both Appium and Espresso tests. Please set *platformVersion* desired capability to "8.0" to test on the new emulators. Android 8.0 emulators with Google API contain Google Play Services version 13.2.80.

Our [Platform Configurator](#) has also been updated to reflect this newest version.

Happy Testing,
Chandra
