

# Viewing Sauce Connect Proxy Tunnels

The **Tunnels** page in the Sauce Labs web interface provides you with an overview of all tunnels under your account, including status, owner, the name of the machine where the Sauce Connect Proxy client is running, and the duration of tunnel up time. You can also stop tunnels from this page, and find the run command, personalized with your authentication credentials, to launch the Sauce Connect proxy client.

- [Viewing Tunnel Information](#)
- [Launching and Stopping Tunnels](#)

## Viewing Tunnel Information

1. Click **Tunnels** in the left-hand navigation of the Sauce Labs web interface.
2. The page shows you the number of active tunnels, and the table below displays this information for each tunnel:

Column	Description
<b>Type</b>	The icon shows whether the tunnel is a Sauce Connect Proxy tunnel, or an IPSec VPN tunnel
<b>State</b>	The icon shows whether the tunnel is running or stopped
<b>Tunnel Name</b>	The name of the tunnel
<b>Client Hostname</b>	The name of the machine where the Sauce Connect Proxy client is running
<b>Owner</b>	The name of the account that is running the tunnel
<b>Sharing</b>	Indicates whether or not the tunnel is shared
<b>Duration</b>	The amount of time the tunnel has been running

## Launching and Stopping Tunnels

- You can launch a new tunnel from the command line of the machine where the Sauce Connect Proxy client is installed by copying the **Run Command**, which will include your authentication credentials. You can also add any [Sauce Connect Proxy parameters](#) you want to use in configuring your tunnel.
- You can stop an individual tunnel by clicking **Stop** under the **Actions** column in the tunnel information table
- You can stop all tunnels under your account by clicking **Stop My Tunnels** in the top-right corner of the page
