

Getting Started

Welcome to Sauce Labs! These topics will help you become familiar with our features, our online interface, and answer some frequently asked questions about testing with Sauce Labs. If you already have Appium or Selenium tests that you want to run on Sauce, check out [Instant Selenium Tests](#) for information on how to set up your tests to connect with our browser cloud and report the results to your Sauce Labs dashboard. You can also check out the [All-The-Things-Digital](#) frameworks for advanced Selenium and Appium automation development.
