

Java Example Script for Android Mobile Application Tests

You can also [clone this script directly from GitHub](#).

Android/SampleSauceTest.java (source from Sample Scripts Java Appium)

```
import org.openqa.selenium.WebDriver;
import org.openqa.selenium.remote.DesiredCapabilities;
import io.appium.java_client.android.AndroidDriver;
import java.net.URL;

public class SampleSauceCheckBoxTest {

    public static final String USERNAME = "YOUR_USERNAME";
    public static final String ACCESS_KEY = "YOUR_ACCESS_KEY";
    public static final String URL = "https://" + USERNAME + ":" + ACCESS_KEY + "@ondemand.saucelabs.com:443/wd/hub";

    public static void main(String[] args) throws Exception {

        DesiredCapabilities capabilities = new DesiredCapabilities();
        capabilities.setCapability("platformName", "Android");
        capabilities.setCapability("deviceName", "Samsung Galaxy S4 Emulator");
        capabilities.setCapability("platformVersion", "4.4");
        capabilities.setCapability("app", "http://saucelabs.com/example_files/ContactManager.apk");
        capabilities.setCapability("browserName", "");
        capabilities.setCapability("deviceOrientation", "portrait");
        capabilities.setCapability("appiumVersion", "1.5.3");

        WebDriver driver = new AndroidDriver<>(new URL(URL), capabilities);

        /**
         * Test Actions here...
         */

        driver.quit();
    }
}
```
