

Sharing the Results of Sauce Labs Tests

Once your test has run and generated a **Test Details** page, you have several options for sharing a link to that page with others. At the top of the test details page is a menu with sharing options. The default selection in this menu is **Team**.

 **Creating Links to Test Detail Pages**

You can also manually build links to Test Detail pages and set authentication for accessing them using the methods described in [Building Links to Test Results](#).

1. Select a sharing option for the **Test Details** page.
When you select an option, you'll see the message **Visibility Changed**.

Sharing Option	Description
Public	Setting the sharing option for your Test Details page to Public means that it is accessible to everyone who has the link to the page, and may be listed on public web pages and indexed by search engines.
Public Restricted	If you want to share your Test Details page and allow access to the test video and screenshots, but restrict log access to yourself, select Public Restricted. By restricting access to the raw Selenium log and the job log, you can prevent sensitive information such as passwords from being visible to others.
Private	The Test Details page is visible only to your account.
Team	The Test Details page is visible to your account and its sub accounts.

2. Copy and send the URL of the Test Details page to anyone you want to share it with.

You can also manually build links to Test Detail pages and set authentication for accessing them using the methods described in [Building Links to Test Results](#).
