

Ruby Example Script for Android Mobile Application Tests

This example uses [environment variables](#) for your Sauce Labs authentication credentials, and the [sauce-whisk gem](#).

You can also [clone this script directly from GitHub](#).

android/simple-appium-android.rb (source from Sample Scripts Ruby Appium)

```
require 'appium_lib'

# Set the environment variables:
# SAUCE_USERNAME = your-sauce-username
# SAUCE_ACCESS_KEY = your-sauce-key

desired_caps = {
  caps: {
    appiumVersion: '1.4.16',
    platformName: 'Android',
    platformVersion: '4.4',
    browserName: '',
    deviceName: 'Samsung Galaxy S4 Emulator',
    app: 'http://saucelabs.com/example_files/ContactManager.apk',
    name: 'Ruby Appium Sauce example'
  }
}

driver = Appium::Driver.new(desired_caps)
driver.start_driver

# Test Actions here...

driver.driver_quit
```
