

Extended Debugging is now available on Android Emulators 6.0+

Starting today Extended Debugging functionality is available for web tests executed on **Android Emulators 6.0/7.0/7.1 + Chrome**

We are always looking for ways to help QA teams debug tests on Sauce Labs and by enabling extended debugging tools on the Android Emulators users are can understand the root cause of the problem by getting access them the important information about the Javascript and Networking issues that application encountered during the test.

In order to start using it, simply add the following line to the desired capabilities of the test all the new information will be automatically attached to the job.

```
"extendedDebugging": true
```
