

Sharing the Results of Sauce Labs Tests

Once your test has run and generated a **Test Details** page, you have several options for sharing a link to that page with others.

Creating Links to Test Results Pages

You can also manually build links to Test Results pages and set authentication for accessing them using the methods described in [Building Sharable Links to Test Results](#).

1. In Sauce Labs, in the left panel, click **Live** or **Automated**, and then click **Test Results**.
2. On the **Test Results** page, click a test in the list to view the test details.
3. In the **Visibility** dropdown, select a sharing option for the test results.

Sharing Option	Description
Public	Everyone will be able to view the test results, and they may be listed on public web pages and indexed by search engines.
Public Restricted	Everyone will be able to view the test results, but only you will have log access. By restricting access to the raw Selenium log and the job log, you can prevent sensitive information, such as passwords, from being visible to others.
Private	Only you will be able to view the test results.
Team	All members of your team will be able to view the test results.
Share	Only people who have the link to the test will be able to view the test results.

4. To manually share the test results, copy and send the URL of the **Test Results** page.
