

Uploading Your Application to Real Devices with the REST API

Below are some examples of how to use the Sauce Labs REST API to upload your mobile application to Sauce Storage. If you do not have an app, consider using the Sauce Labs [Swag Labs sample app](#) for validating your account functionality as well as your tests.

- [RDC on Sauce API](#)
- [Legacy Test Object API](#)

Choosing a REST API

The APIs and authorization credentials you use depend on what you run Appium tests with:

- RDC on Sauce/Sauce Labs - Please use the Sauce Labs Storage REST API (app.saucelabs.com)
- Legacy Real Devices/Test Object - Please use the Legacy Real Device Cloud REST API (app.testobject.com)

For details related to authorization credentials, see [Data Center Endpoints](#).

Please select your Sauce Labs Testing Platform:
