

# RDC Carrier Network Connectivity

Return to the [Product Announcements and Release Notes Blog](#)

We are happy to announce general availability for Carrier Network Connectivity on the Sauce Labs Real Device Cloud (RDC).

Carrier Network Connectivity allow private cloud customers to connect one or more of their private devices to a carrier network in order to complete testing scenarios which are not feasible using a WiFi only connection, e.g. dial and text message to/from the device.

Please contact your Customer Success Manager or Account Executive to add carrier network connectivity to your devices today.

Happy Testing,  
Asaf Saar

Director of Product Management
