

Face ID/ Touch ID for Live Testing (Available on iOS)

Return to the [Product Announcements and Release Notes Blog](#)

We are happy to announce that you can now use biometric authentication via Face ID or Touch ID in your Live App tests on Real Devices.

More documentation and information on this capability can be found in [Face ID/Touch ID \(Biometric Authentication\) in Live Mobile App Testing on Real Devices](#)

Please notice: This feature is compatible only with iOS Devices. We are working to support Android's Fingerprint soon.

Happy Testing!
