

Launched: Android/Chrome Dev Tools Available (Live Testing Real Devices)

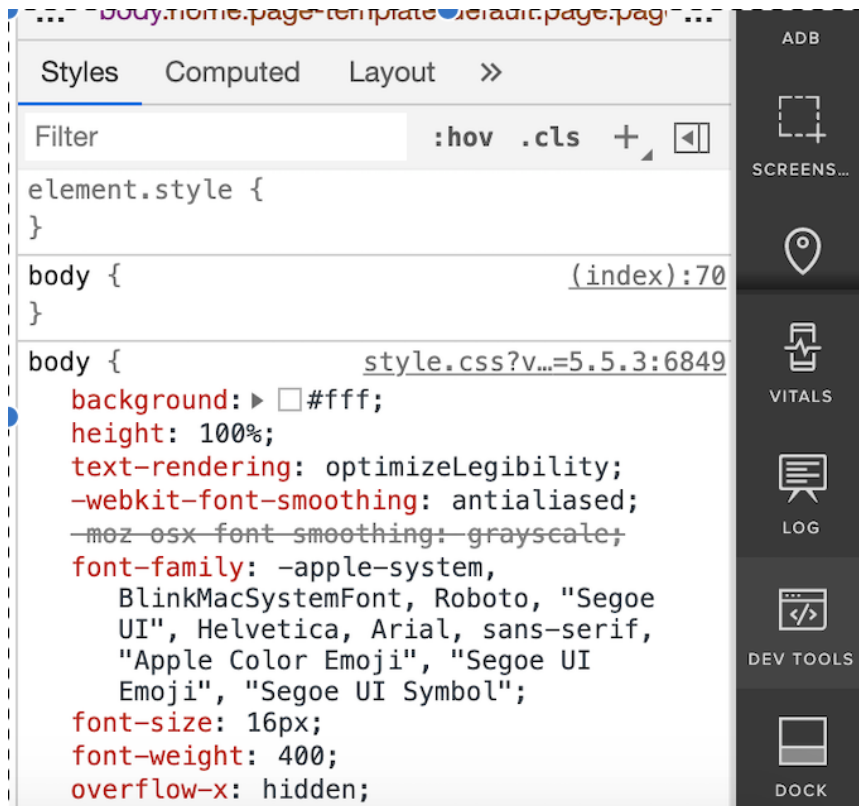

We're excited to announce a new feature is available: Android dev tools during live testing real devices in Sauce Labs. This is part of the migration of real device testing features from TestObject to Sauce Labs. To stay updated on the progress please visit [Real Device Testing in Sauce Labs Feature Preview](#).

Android Debugger / Dev Tools

- In cross-browser testing with real devices, you can now use Chrome's debug protocol with Android devices
- This will allow you to inspect websites on Android devices during live testing and use the dev tools to debug issues
- The Android debugger also supports the ability to open up multiple tabs

One limitation to note

- you must be logged into Sauce Labs on Chrome, pick an Android real device, and load Chrome in the device in order for this to work

If you have any questions or concerns, please reach out to our [support team](#).

Happy Testing!
