

Chrome 88: Now Available in Sauce Labs!

Return to the [Product Announcements and Release Notes Blog](#)

Hello Sauce user!

We are happy to announce that Sauce Labs now support Chrome 88, as we continue to provide our users with the best coverage for testing applications.

Note that Chrome on Mac, starting at version 88, now requires OSX 10.11 (El Capitan) or later.

Here is an example of W3C compatible capabilities for Chrome using Java:

Chrome 88

```
MutableCapabilities sauceOptions = new MutableCapabilities();

ChromeOptions browserOptions = new ChromeOptions();
browserOptions.setExperimentalOption("w3c", true);
browserOptions.setCapability("platformName", "Windows 10");
browserOptions.setCapability("browserVersion", "88.0"); // or "latest"
browserOptions.setCapability("sauce:options", sauceOptions);
```

Our [Platform Configurator](#) has also been updated to reflect this newest version.

Happy Testing!
